DESCRIPTION: THE PILL/OVARIAN CANCER REPORTER: MARIA CELESTE

In Health Today: Women who take contraceptive pills are protected from ovarian cancer, for decades after stopping their use. British researchers found that women who used the Pill during 15 years reduced their risk of ovarian cancer by half and the risk continued to be minimal until 30 years later. According to the study, the risk of developing ovarian cancer drops by 20% for each 5 years that a woman takes the contraceptives.

DESCRIPTION: SALIVA TEST/DETECTS CANCER REPORTER: MARIA CELESTE

In Health Today, we tell you about a simple saliva test that can help doctors detect cancer in the head and neck. A Johns Hopkins University study detected the diseases in 43% of the cases based on genetic analysis of the saliva. Although a blood test continues to be the most effective at discovering this type of cancer, this new test may be more precise in determining who does NOT have it, with an effective rate of 81%

DESCRIPTION: BLUE CODE/MIDNIGHT REPORTER: MARIA CELESTE

In Health today: It seems that the possibilities of surviving a heart attack can depend on the time! Researchers in Virginia studied the records of 86,000 adults who experienced a heart attack while in the hospital and found that those who had the heart attack after 11pm had lower survival rates than the others. And those who survived were more likely to have neurological complications. The same result was found for weekends. Experts believe that the cause is due to there being less medical personnel in hospitals at night and on weekends.

DESCRIPTION: GREEN TRASH CAN REPORTER: MARIA CELESTE

I have now the first “green” wastebasket that functions on solar energy and compacts trash when it reaches a certain level. This can reduce by more than half the amount of

plastic bags necessary for trash...and now, also contributes to saving gas because the garbage trucks have to make less trips to the dump. There are already 1,300 of these wastebaskets installed throughout the United States and the world.

DESCRIPTION: DIAMOND IPOD REPORTER: VANESSA HAUC

For music lovers, I have an Ipod that is literally a jewel! It's a device made with gold and diamonds designed by a famous Norwegian jeweler who decided to mix the elegance and luxury of the jewels with technology. The result is the world's most expensive Ipod, crafted in pink and white 18k gold and 430 diamonds valued at \$41,000. This "musical gem" will be auctioned soon in London and the proceeds will be donated to worthy causes.

DESCRIPTION: BELLY FAT REPORTER: VANESSA HAUC

In Health Today: A new study reveals that a big belly can increase your risk of dementia, something very disturbing considering that 50% of Americans have an excess of belly fat. The researchers who conducted the study in California with thousands of people between 40 and 45 years old, concluded that 16% developed dementia. Even those with a normal weight but with a pronounced belly had higher probabilities of developing dementia although the risks increase by 200% for those who are overweight and have a large belly. Experts have concluded that this proves that belly fat affects the brain.
